PROFILE

Informatics Engineering undergraduate building web, mobile, and computer vision systems. Experience spans a role-based warehouse platform, private-client Flutter applications, face detection and recognition research, and government IT infrastructure.

EDUCATION

Universitas Dian Nuswantoro (UDINUS) Semarang, Indonesia
B.Eng. in Informatics Engineering | GPA: 3.88 / 4.00 | In progress

SMKN 1 Pemalang Pemalang, Indonesia
Computer and Network Engineering | Graduated 2022

EXPERIENCE

PT Talangmas Anugerah Semesta Aug 3 - Nov 3, 2026
Machine Learning Engineer Intern | Ongoing
- Developing computer vision models focused on face detection and recognition.

Freelance Mobile Developer 2024 - Present
Indonesia
- Built private-client Flutter applications, including a restaurant POS for tables, orders, menu stock, expenses, and financial reporting.
- Integrated Supabase-backed mobile workflows and image analysis with YOLO and ResNet models.

Freelance Front End Developer 2024
Indonesia
- Built responsive website layouts and interactive components with Bootstrap, JavaScript, and PHP to meet client requirements.

Dinas Komunikasi dan Informatika Provinsi Jawa Tengah Jun - Sep 2021
IT Intern | Semarang, Indonesia
- Maintained internal network infrastructure, monitored traffic and disruptions with Winbox, and updated the provincial government website.

SELECTED PROJECTS

Warehouse Management System ERP-style web application
React, TypeScript, Supabase, Zustand, Tailwind CSS
- Built role-based workflows across warehouse, purchasing, parts, project operations, and director oversight.
- Covered inventory and purchase transactions, part requests, service work orders, vehicle records, reports, and PDF/Excel exports.

Spatial Disaster Damage Analysis System Research prototype
- Built a six-class image analysis workflow and compared ResNet-50 with ViT-B/16 on an imbalanced 13,556-image dataset.
- ResNet-50 with class weights reached 96.61% validation accuracy and 0.96 macro F1 in the working study; deployed a model backend with Hugging Face and Docker.

IsiListrik Independent research prototype
- Designed a Flutter multi-meter interface with local data persistence and simulated token top-ups; physical-meter integration and user evaluation remain future work.

TECHNICAL SKILLS

Languages: Python, JavaScript, TypeScript, SQL, HTML, CSS, Dart

Web and mobile: React, Vite, Flutter, Bootstrap, Tailwind CSS, Zustand

Data and backend: Supabase, PostgreSQL, MySQL

Machine learning: PyTorch, TensorFlow, Keras, OpenCV, YOLO, ResNet-50, CNNs

Tools: Git/GitHub, Figma, Docker, Winbox, Microsoft Office

CERTIFICATIONS

- Machine Learning with Python - IBM, Apr 2026
- Introduction to Deep Learning & Neural Networks with Keras - IBM, Apr 2026
- Belajar Machine Learning untuk Pemula - Dicoding Indonesia, Dec 2025
